

Playbook for industrial manufacturing leaders

Keeping production flowing. Keeping operations in control.

Industrial manufacturing depends on consistency. Steady production. Predictable execution. Parts and materials available exactly when they're needed. When supply instability, cost pressure or ageing processes creep in, even highly efficient operations can start to struggle.

When you PreBilt your supply chain, manufacturers regain clarity and control on the shop floor and across the wider supply chain. It delivers intuitive execution, consistent workflows and real-time visibility that make production simpler, more accurate and far more reliable.

Built for manufacturing operations where precision matters

Manufacturing environments are complex by nature. Production relies on precise material timing, tight coordination between systems and flawless execution across teams. When visibility is limited or processes are disconnected, the result is excess WIP, idle time, errors and unnecessary disruption.

PreBilting removes that friction. By working directly inside SAP, it connects people, processes and data in real time, giving teams the confidence to keep production moving, even when conditions change.

When manufacturing gets challenging, PreBilt brings control

Manufacturers are under constant pressure. Supply instability makes it harder to rely on incoming materials. Regulations around safety, materials and the environment add complexity. Manual staging, backflushing and disconnected scheduling introduce errors and slowdowns. Legacy customisations make upgrades risky and improvement harder than it should be.

PreBilt addresses these challenges at the point of execution. It simplifies how work gets done on the shop floor, reduces reliance on manual intervention and gives teams a clear, consistent way to execute day to day tasks without guesswork.

PreBilt it. Simplification, traceability and flexibility

PreBilt brings live insight and execution tools directly to production teams. With a constant connection to SAP, operators can see exactly what materials are available, where they're located and what needs to happen next, helping them act quickly and maintain supply without stopping the line.

Shop floor processes are simplified through intuitive workflows and clear screens. From staging materials and issuing parts to confirming completions, tasks are easy to follow and consistently executed. This reduces errors, cuts rework and keeps production moving with less noise.

Traceability is built in. Compliance-based activities are completed naturally as part of each task, with data captured automatically and stored for review. Operators spend less time on administration and more time on productive work, while quality, safety and audit requirements are met without friction.

When demand changes or plans shift, PreBilt adapts quickly. Processes can be reconfigured in hours, not days, allowing teams to respond without disruption and maintain continuity even during periods of change.

The outcome: Clarity, consistency and confidence

When you PreBilt, manufacturers gain a clearer view of production operations and greater confidence in execution. Shop-floor teams spend less time fixing errors and chasing information, and more time moving work forward. Material flows become smoother, data more reliable and surprises far less frequent.

The result is a manufacturing environment that's easier to manage, more dependable and ready for what comes next.

Why industrial manufacturing PreBilt it

PreBilt helps manufacturers:

- Maintain steady production flow
- Reduce WIP, errors and idle time
- Improve coordination between production and warehouse
- Meet regulatory and compliance requirements with ease
- Adapt quickly to change without disruption
- Trust their data and execution processes
- All without adding new complexity.

Your next step

If your manufacturing operation depends on reliable execution, accurate data and the ability to adapt under pressure, by PreBilting it you get the control to deliver every shift, every day.
